Aluminium Access Ramps

From Able Access

Able Access produce the ultimate modular ramp system, which has totally revolutionised the New Zealand disability access market. Manufactured in-house using locally sourced materials, its unique simplicity and load bearing strength allows it to adapt to countless ramp applications.

Able Access modular ramps are designed to provide safe disability access into buildings such as private homes, schools, shops, hotels etc. Modular ramps are preferred by many hospitals and health funding providers because no expensive foundations are required. This means the ramp system can be removed from the property leaving no sign of its existence there. The system can be easily and quickly installed at a different property, providing a truly cost effective solution.

Proudly New Zealand made

We have a team of installers constantly traveling the length of the country, dedicated to the installation and removal of our ramps. This way we guarantee the installation is to a safe and satisfactory standard, with a personal level of care.

anti-slip matting available

Custom Design

In-house manufacturing allows custom design with regards to slope, length, shape, size and number of platforms.

New Zealand Made

Using recyclable products from New Zealand suppliers.
